What is Domicology?

The study of the economic, social, and environmental characteristics relating to the life cycle of the built environment.

Learn more: domicology.msu.edu

The Michigan State University Center for Community and Economic Development will be hosting an event to highlight advancements in the realm of Domicological research, policy, and practice. We will be discussing progress in the theory and practice of reducing structural abandonment while increasing material salvage.

KEYNOTE

Jeff Spencer

Jeff is currently the unit supervisor for the Sustainable Materials Management Unit within the Materials Management Division (formerly Waste Management and Radiological Protection Division). Programs within the unit include E-Waste, Composting, Scrap Tires, County Planning, and Food Waste. Prior to taking his current position, Jeff was with the Pollution Prevention unit for nearly 17 years focusing on forging partnerships, which included working with local units of government, businesses, associations, and many others. Examples of continuing stewardship networks include; the Green Communities Network and Challenge (100+ members), MI Clean Marinas, Michigan Turfgrass Environmental Stewardship Program, and the MI DNR Parks & Recreation Green Initiatives Team.
